

# Build a model

## Model selection

Select a model that matches the research question and fulfills domain-specific requirements

## Model fit

Fit the model in your preferred framework (Frequentist, Bayesian, Machine learning)

↓ Prediction machines workflow

# Compute estimand(s)

## Target quantities

- Predictions
- Comparisons
- Slopes

## Additional decisions

- Unit-level estimates or averages
- Choice of scale

↓ Prediction machines workflow

# Statistical testing

- Uncertainty quantification
- Null hypothesis tests
- Equivalence tests

Standard workflow:  
Coefficients are  
studied directly
